

HTTP

- HyperText Transfer Protocol — uses port 80, sends data without encryption, and is less secure.

HTTPS

- HyperText Transfer Protocol Secure — uses port 443, uses TLS to encrypt data, and provides a more secure connection.

HTTP vs HTTPS

NO	HTTP	HTTPS
1	HyperText Transfer Protocol	HyperText Transfer Protocol Secure
2	Data is not encrypted	Data is encrypted
3	Less secure	More secure
4	Uses port 80	Uses port 443
5	Does not use TLS for security	Uses TLS to secure communication

6	URL starts with http://	URL starts with https://
7	Not suitable for sensitive information like passwords	Suitable for passwords, payment details, and login data
8	Usually shows no padlock 	Usually shows a padlock  in the browser
